

## Wildlife

Let the animals do the teaching as they show you their habitats, communities, adaptations, and interactions.

## Rangeland

Nearly one-half of Idaho is rangeland (about 21 million acres). Idaho rangelands are extremely valuable because they support many different uses, from recreation to livestock grazing and many more in between.

## Soil

Soil is the basis for all life. Learn how soils vary across the landscape and the management practices that we use to determine their health and functionality.

## Forest

The forest serves many key purposes in Idaho; from recreation to a source of fuel. Forests also protect our soil, store

our water, and keep the air clean for us to breathe.

## Water

Water has been described as the elixir of life, the universal solvent, and the lifeblood of nations. Explore water quality issues of irrigation, municipal uses, recreational use, and pollution potential... and meet the tiny creatures that call our water their home!
